Create a new class

Epic: Manage Classes

As a content admin or system admin **Narrative**

I want to create a new class

So that I can enable students to watch more learning content in a course.

1. User must be able to create a new stand-alone class. <u>Acceptance</u> <u>Criteria</u> 2. User must name the new class with a unique title.

3. User must be able to enter a student-viewable description of the class.

4. User must define the customer access as Global, Restricted or Private.

6. User can optionally enter notes written by the instructor.

7. User can enable/disable any special tools (tabs) will shown to the student in the class.

9. User can save the class as a DRAFT when the class is first created.

8. User can upload class materials as individual files for download by the student.

View existing classes

Classes

Entering class name

← Back to Learning Platform

10. User can cancel class creation at any point.

Scenarios

Begin class

creation process

Given the user is in the classes section of the admin panel When the user clicks on the Create Class button

Then a creation modal will appear to begin the process.

Scenarios walk through the steps that users

will perform to use the feature. These steps

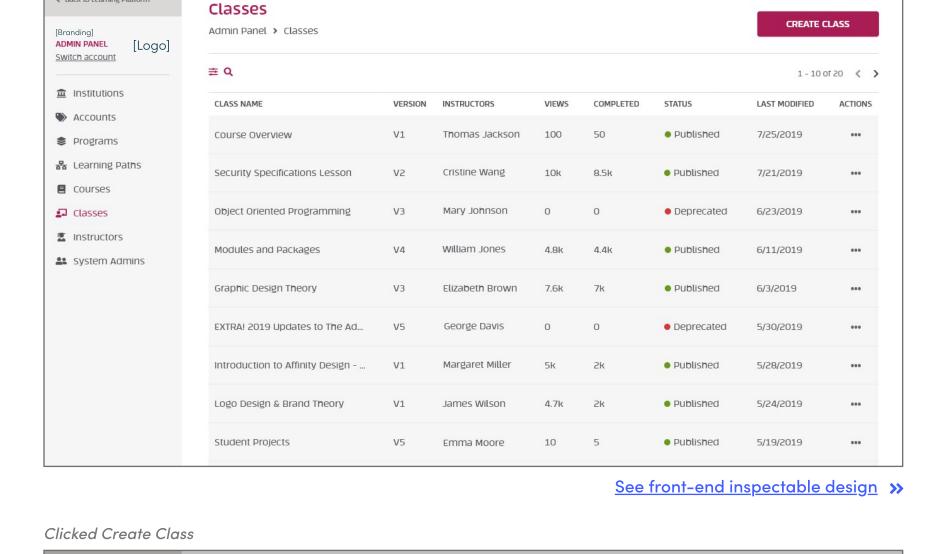

are tightly aligned to the UX, so we embed

the designs within the documentation so

developers can quickly build each feature.

Note: Modals can only be closed

by clicking on the Cancel button or **X** icon on the top right.

The narrative paints a picture of what

therefore what problem is being solved.

Acceptance criteria inform what users

can accomplish after the feature is

the user wants to accomplish, and

implemented.

CREATE CLASS Create Class Admin Panel > Switch account **≢** Q CLASS NAME Accounts Course Overv Programs 器 Learning Paths Security Speci ■ Courses Classes Object Orient Instructors Modules and F 🔐 System Admins Graphic Design

See front-end inspectable design >>>

class name

Step 1: Enter

When he/she clicks on class name field

class creation modal

Given the system admin in the

Then he/she will be able to type in until the maximum character

limit is reached.

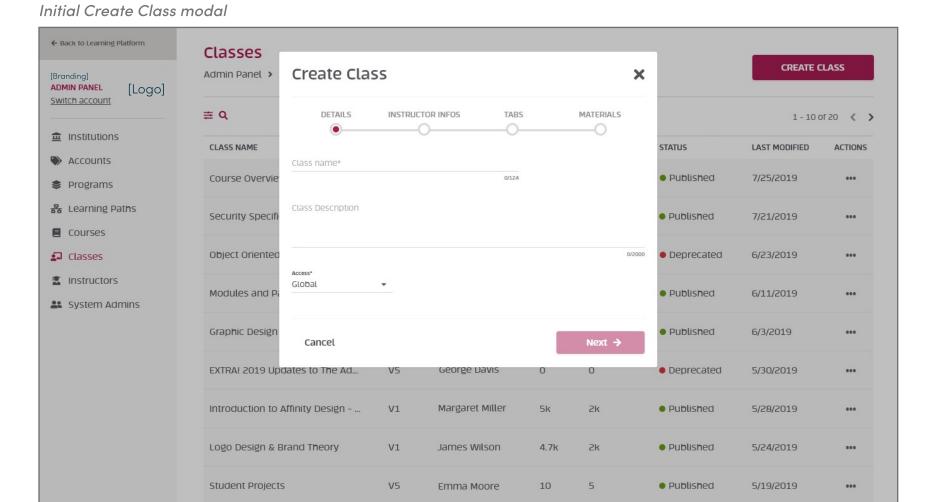

The class name is unique so an error must appear if the user tries

Notes

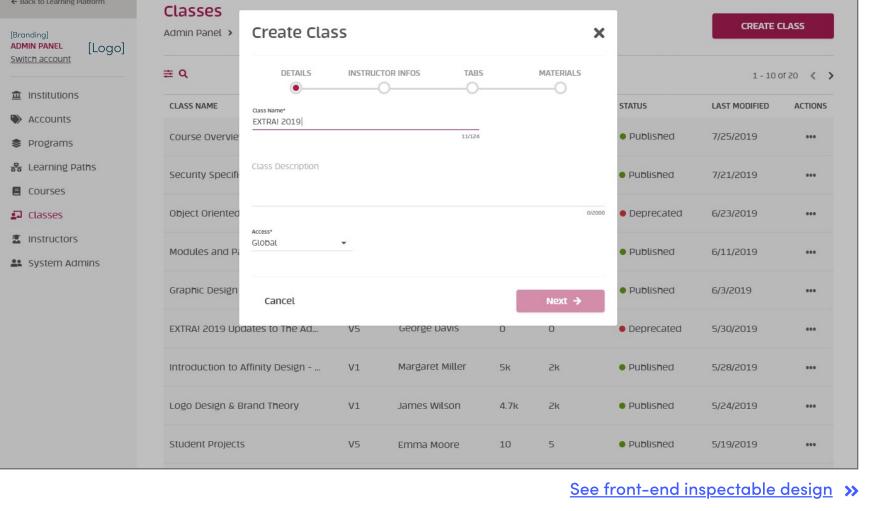

to create a duplicate. As a standard, the *Next* button will be disabled until all required

fields are filled. In this case, just the class name field is required. If the user exceeds the character limit, an error message must

appear and the *Next* button must be disabled.
